**FOR IMMEDIATE RELEASE**

## **CAMCORP NAMES NATIONAL OEM SALES MANAGER**

**Lenexa, Kansas, February 2, 2021** -- CAMCORP, a manufacturer of high-performing air pollution control and pneumatic conveying equipment is proud to announce the addition of Angela "Angi" Hamlin as National OEM Sales Manager.

Hamlin has nearly 15 years of successful industrial sales and account management experience, specializing in solutions for clean air and sanitary design requirements within the food industry. Her most recent experience was selling dust collector bags and maintenance services.

"I was particularly struck by Angi's history of becoming a subject matter expert and getting trust from the customer," Jim Weber, Vice President of Sales and Marketing. "To consistently increase revenue, profit, and her customer base is a true testament of Angi's trusting relationships she builds."

Hamlin will be responsible for developing new business by helping customers and partners achieve their environmental goals. "I am excited for the opportunity with CAMCORP," says Hamlin. "I do not view customers as a business transaction, but as partners." She also added, "I look forward to building and fostering long lasting partnerships with the support of CAMCORP and the other Member of Scheuch Group companies."

Hamlin has obtained her Mine Safety Health Administration (MSHA) certification as well as received her certificate after attending last year's Michigan Industrial Ventilation Conference (Michigan IVC).

About CAMCORP

CAMCORP dust collection and bulk material handling solutions can be standard or modified to fit any application. With nearly three centuries of combined experience, our experts have tackled every application and realize there is not a one size solution fits all. Passionate, hard-working employees and in-house manufacturing experts take pride in and stand by their work. Not only do we design, build, and support reliable air pollution control and bulk material handling equipment, but we also build trust in all that we do. Air filtration and pneumatic conveying needs are ever-changing.
